```
peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic cyclising the peptides of comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis.

Comeovacularisation or lymphangiogenesis in a mammal with a condition characterised by angiogenesis, neovascularisation or lymphangiogenesis.

Compandition is diabetic retinopathy, psoriasis, arthropathy, recondition is diabetic retinopathy, psoriasis, arthropathy, cerebrovascular accident, post-engosis, head, head, heat or cold trauma, substance-induced neovascularisation of the liver, excessive companding angiogenesis and angiogenesis and angiogenesis are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in pertipheral limbs or in lungs, peritoneal cavity, pleura, or brain. The peptides are used to image blood vessels and lymphatic cor brain. The peptides are used to image blood vessels and lymphatic cor brain. The peptides are used to image blood vessels and lymphatic corrections inflammation with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid arthritis, psoriasis and also existed and also best inflammation, especially rheumatoid arthritis, psoriasis and also existed.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine

c to cyclisation are used to interfere with angiogenesis,

neovascularisation or lymphangiogenesis in a mammal with a condition

characterised by angiogenesis in a mammal with a condition

characterised by angiogenesis in covascularisation or lymphangiogenesis.

The condition is diabetic retinopathy, psoriasis, arthropathy,

the angiona, vascularised malignant or benign tumour, post-recovery

crebrovascular accident, post-angioplasty restenosis, head, heat or cold

traum, substance-induced neovascularisation of the liver, excessive

creabrovascular accident, post-angioplasty restenosis, head, heat or cold

traum, substance-induced neovascularisation of the liver, excessive

creaple hypertension induced neovascular sequelae, or chronic liver

infection. The peptides are also used to modulate vascular permeability

crimfection in peripheral limbs or in lungs, peritoneal cavity, pleura,

or brain. The peptides are used to image blood vessels and lymphatic

crobing the monomeric and bicyclic peptides are used to interfere

crownulation or biological activity induced by VEGF, VEGF-C or -D and

are also used in combination with an anti-inflammatory agent, to treat a

chronic inflammation, especially theumatoid arthritis, psoriasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                           whose 3-dimensional structure is modelled on the expose loop of human VEGPD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betacathon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amino acid deleted prior
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human CC whose 3-dimensional structure is modelled on the expose loop of human CC whose 3-dimensional structure is modelled on the expose loop of by a measuring beta carbon separation distances on opposite antiparallel strands of a complete of producing a monomeric monocyclic peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides, and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with amplogenesis, neovascularisation or lymphanjogenesis in a mammal with a condition is diabetic retinopathy, psortassis, arthropathy, characterised by angiogenesis, neovascularisation or lymphanjogenesis. The condition is diabetic retinopathy, psortassis, head, heat or cold crander substance and maintain to benign tumour, post-recovery cerebrovascular accident, post-angioplasty restenosis, head, heat or cold cormone-related angiogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver cormulation in peripheral limbs or in lungs, peritoneal cavity, pleura, cormulation in peripheral limbs or in lungs, peritoneal cavity, pleura, cormulation in peripheral limbs or in lungs, peritoneal cavity, pleura, vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF. Cormic inflammation, especially rheumatoid arthritis, psoriasis and chabetic retinopathy.
                                                                                                                     Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Human, VEGF; vascular endothelial growth factor; angiogenesis; neovascularisation; lymphangiogenesis; psoriasis; tumour; diabetes induced neovascular sequelae; rheumatoid arthritis; diabetic retinopathy; chronic inflammation; cyclic.

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human CC whose 3-dimensional structure is modelled on the expose loop of human CC Wascular endothelial growth factor. The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betactor producing a monomeric monocyclic peptide by producing a monomeric monocyclic peptides, dimeric bicyclic peptides loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with anglogenesis,

CC peptides and a cyclic peptide with at least one amino acid deleted prior to cyclisation are used to interfere with anglogenesis,

CC cyclisation are used to interfere with anglogenesis,

CC dracacterised by anglogenesis, neovascularisation or lymphanglogenesis.

CC characterised by anglogenesis, neovascularisation or lymphanglogenesis.

CC craum, substance-induced mecvascularisation of the liver, excessive corebrovascular accident, post-regovery

CC craums, substance-induced neovascularisation of the liver, excessive cormone-related anglogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fill decomposed by mammal has a condition characterised by fill decomposed by the accumulation in peripheral limbs or in lumgs, peritoneal cavity, pleurs, cor brain. The peptides are used to image blood vessels and lymphatic vacuulation in peripheral limbs or influenced by VEGF. Cor -D and are also used in combination with an anti-inflammatory agent, to treat a chronic inflammation, especially rheumatoid archite; psoriasis and corrected and and corrected archite; produced archite induced neovascular permeabi
                                                                                                                                                                                                                                                                                                                                                     Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Gaps

This sequence is a fragment of feline immunodeficiency virus (FIV) glycoprotein 130. Peptides AAY57038-Y57039 are used in the invention as capture polypeptides when diagnosing FIV infection. The invention relates to an antibody binding composition which consists of an enhanced capture polypeptide, which contains an immunogenic fragment of FIV gag precursor p55, and a second fragment which is part of the env precursor gp130, and an antibody-binding detection composition. The invention also includes a device for performing an assay which determines whether a felline is infected with FIV. The novel method is used for the diagnosis of Feline Immunodeficiency Virus infection
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Immunoglobulin binding peptide, autoimmune disease; rheumatoid arthritis; multiple sclerosis; myasthenia gravis; immunosuppressive; antirheumatic;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VEGFD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betabet carbon separation distances on opposite antiparallel strands of a peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptide with at least one amonocyclic peptides, dimeric bicyclic peptide with at least one amonocyclic correlation are used to interfere with angiogenesis.

The condition are used to interfere with angiogenesis.

The condition is diabetic retinopathy, psoriamis with a condition of condition is diabetic retinopathy, psoriamis, arthropathy, hemangioma, vascularised malignant or benign tumour, post-recovery correlators are condent, post-angioplasty restenosis, head, heat or cold trauma, substance-induced neovascularisation of the liver, excessive hormone-related angiogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in aminal (the mammal has a condition characterised by fluid or haring the peptides are also used to modulate vascular permeability or haring the mammal to the mammal to the mammal the mammal to the mamm
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            or brain. The peptides are used to image blood vessels and lymphatic vasculature. The monomeric and bicyclic peptides are used to interfere with at least one biological activity induced by VEGF, VEGF-C or -D and are also used in combination with an anti-inflammatory agent, to treat a

The present invention describes a method for diagnosing a disorder characterised by expression of a human cancer associated antigen (CAA) precursor (I) coded by a NA Group I nucleic acid molecule (NI) comprising contacting the biological sample with an agent (A) that specifically binds to NI, (I) or its fragment, complexed with an human leukocyte antigen (HLA) molecule and determining the interaction between the agent and NI or (I). (I) has cytostatic activity and can be used for treating a cherapy and vaccine production. The method can be used for treating a cubject with a condition characterised by expression of (I) in cells of subject with a condition characterised by expression of (I) in cells of subject. AAB75607 and AAB75608 represent proceins from human cancer associated antigen precursors, and AAB75609 to AAB75802 represent HLA class I binding motifs in human cancer associated antigen precursors cycle given in the exemplification of the present invention
        T-cells expressing receptors containing the peptide sequences, which include antigen-specific immunological tolerance to rheumatoid arthritis can be used for the treatment and prevention of rheumatoid arthritis. The invention can be used for the diagnosis, treatment and prevention of rheumatoid arthritis. Sequences AAY6671-958 represent peptides from the various Wheta chains of T cell antigen receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Diagnosing a disorder characterized by expression of a human cancer associated antigen precursor, comprises detecting interaction of an agent with a nucleic acid molecule encoding the antigen precursor.

Immunoglobulin binding peptide; autoimmune disease; rheumatoid arthritis; multiple sclerosis; myasthenia gravis; immunosuppressive; antirheumatic; neuroprotective.
                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to immunoglobulin binding peptides. These can be used to remove autoantibodies from solutions, particularly autoantibodies associated with autoimmune diseases such as rheumatism, multiple sclerosis and myasthenia gravis, from body fluids. The present sequence is a peptide of the invention
                                                                                                                                                                                                                                                                                                                                                    New immunoglobulin-binding peptides, useful for removing autoantibodies from serum, e.g. for treating rheumatism, also related solid phases.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Homing peptide; organ; tissue; lung; pancreas; skin; retina; MDP;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       The invention relates to peptide sequences present in the synovial fluid and membranes of rheumatoid arthritis patients, arising from the CDR region of oligoclonal pathogenic T-cell antigen receptor Wbeta chains. Compositions which contain autoantigenic peptides binding specifically to T-cells expressing receptors containing the peptide sequences, which include antigen-specific immunological tolerance to rheumatoid arthritis can be used for the treatment and prevention of rheumatoid arthritis. The invention can be used for the diagnosis, treatment and prevention of rheumatoid arthritis. Sequences AAV66771-958 represent peptides from the various Wbeta chains of T cell antigen receptor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           T-cell antigen receptor V-beta chain CDR3 region sequences accumulated in synovial membranes of rheumatoid arthritis patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Gaps

                                                                                                                            The present invention describes peptides that selectively home to a tissue or organ. The peptides can be used for identifying an organ or tissue is identifying a target molecule expressed by an organ or tissue or for treating an organ or tissue pathology, where the organ or tissue is selected from prostate, lung, skin, retina, pancreas, gut, ovary, adreanal gland, liver, and lymph node. The peptide bind to the membrane dipeptidase (MDP) AAY48618 to AAX49066 represent sequences which are used in the exemplification of the present invention. (Updated on 20-MAR-2003 to correct PR field.)
                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This invention describes a novel tumor-associated antigen, designated 9D7 which has cycostatic activity. The invention also describes a method for isolating (al a polypeptide (I) that includes (81) as part of its sequence; (b) an immunogenic protein fragment or peptide (II) derived from 9D7; (c) a pharmaceutical composition containing at least 1 of 9D7, (l) as active ingredients; (d) an isolated DNA (III) encoding a protein (IV) with the immunogenic properties of 9D7 or its fragments; (e) a recombinant DNA (IIIa) that includes (III); and (f) antibodies (Ab) directed against 9D7, (1) or (II). 9D7, or its derived immunogenic
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     for immunotherapy of cancer
                                        New peptides which selectively home to organs or tissues, used for, e.g. identifying target ligands and for therapy of pathological conditions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         immunotherapy; cancer; cellular anticancer vaccine; diagnostic; kidney;
lung; colon; breast; carcinoma; Hodgkin's lymphoma.

peptides, are used to induce a humoral and/or cellular response for use in in vivo or ex vivo immunotherapy of cancer. DNA (III) that encodes 9D7 can be used similarly and cells that express 9D7 are useful in cellular anticancer vaccines. Antibodies (Ab) specific for 9D7 are useful for imaging, diagnosing and monitoring cancers, also, when conjugated to cytotoxins or radiomuclide, as therapeutic agents. Peptides derived from 9D7 may also be used diagnostically to test for an immune response. 9D7-associated cancers are particularly kidney, lung, colon and breast carcinoma and Hodgkin's lymphoma. AAB10874-B10899 represent immunogenic fragments of the human tumor-associated antigen 9D7 which is described in the method of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Fibrin binding peptide; thrombosis; pulmonary embolism; atherosclerosis; myocardial infarct; ischaemia; imaging; rheumatoid arthritis; vasotropic; ansemia; hypoxia; tumour; diabetic retinopathy; autoimmune disorder; inflammatory disorder; anglogenesis; stroke; cerebroprotective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a synthetic fibrin binding group having affinity for fibrin. The invention is useful for detecting fibrin in a mammalian subject which involves (a) detectably labelling the binding group; (b) administering to the subject the labelled polypeptide, and (c) detecting the labelled polypeptide in the subject. The invention is useful for treating a disease involving thrombus formation eg. deep-vent thrombosis, pulmonary embolism, cardiogenic thrombosis, atherosclerosis, myocardial for detection, imaging and localisation of fibrin-containing clots by magnetic resonance imaging, radioimaging and other imaging methods and are also useful in the diagnosis and treatment of coronary conditions where fibrin plays a role. The fibrin binding moieties are useful for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel synthetic fibrin-binding moiety, useful for detecting, imaging or localizing fibrin-containing clots by magnetic resonance imaging, radioimaging and for treating diseases involving thrombus formation e.g.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Gaps

detecting and diagnosing numerous pathophysiologies in which fibrin plays a role eg. peritoneal adhesions which often occur after surgery or inflammatory and neoplastic processes and are comprised of a fibrin network, fibroblasts, macrophages and new blood vessels; rheumatoid
                                                                                                                arthritis, lupus or septic arthritis which often have bits of fibrin containing tissues called rice bodies in the synovial fluid of their joints; thrombocytopenic purpura, a type of anaemia in which deposits in arterioles causes turbulent blood flow resulting in stress and destruction of red blood cells. The fibrin specific agents can also be used to detect hypoxia or ischaemia of heart, kidney, liver, lung, brain retinopathy, early or high-risk atherosclerosis and other autoimmune and inflammatory disorders. Fibrin specific agents also could provide both direct or surrogate markers of disease models in which hypoxia and anglogenesis are expected to play a role. The invention is also useful for screening molecular libraries. The present sequence is a fibrin

This invention describes a novel tumor-associated antigen, designated 9D7 which has cytostatic activity. The invention also describes a method for isolating (a) a polypeptide (I) that includes (S1) as part of its sequence; (b) an immunogenic protein fragment or peptide (II) derived from 9D7; (c) a pharmaceutical composition containing at least 1 of 9D7, (I) or (II) as active ingredients; (d) an isolated DMA (III) encoding a protein (IV) with the immunogenic properties of 9D7 or its fragments; (e) a recombinant DNA (IIIa) that includes (III); and (f) antibodies (Ab) directed against 9D7, (I) or (II). 9D7, or its derived immunogenic New tumor-associated antigen 9D7, useful e.g. for immunotherapy of cancer and for producing diagnostic or therapeutic antibodies. Claim 6; Page 45; 50pp; German.

peptides, are used to induce a humoral and/or cellular response for use in in vivo or ex vivo immunotherapy of cancer. DNA (III) that encodes 907 can be used similarly and cells that express 907 are useful in cellular anticancer vaccines. Antibodies (Ab) specific for 907 are useful for imaging, disagnoshing and monitoring cancers, also, when conjugated to cytocoxins or radiomucilde, as therapeutic agents. Peptides derived from 907 may also be used diagnostically to test for an immune response. 907-associated cancers are particularly kidney, lung, colon and breast carcinoma and Hodgkin's lymphoma. ABB10899 represent immunogenic fragments of the human tumor-associated antigen 907 which is described in the method of the invention 883888888888888

Sequence 626, Application US/09573822C

Sequence 626, Application No. 920030199011A1

GENERAL INFORMATION:
APPLICANT: Proteom Ltd

TITLE NOF INVENTION: Complementary peptide ligands generated from microbial genome seq
FILE REFERENCE: Microbe patent
CURRENT APPLICATION NUMBER: US/09/573,822C

NUMBER OF SEQ ID NOS: 804

SOFTWARE: PACPALENT version 1.0

SEQ ID NO 626

LENGTH: 10

TYPE: PRT

CRANISM: mycoplasma genitalium
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ..

Sequence 140, Application US/09795006A

Patent No. US20020151680A1

GENERAL INFORMATION:

APPLICANT: Alitalo et al

TITLE OF INVENTION: MATERIALS AND METHODS INVOLVING HYBRID VASCULAR

TITLE OF INVENTION: MATERIALS AND METHODS INVOLVING HYBRID VASCULAR

TITLE OF INVENTION: ENDOTHELIAL GROWTH FACTOR DNAS AND PROTEINS

TITLE OF INVENTION: BNDCHHELIAL GROWTH FACTOR DNAS AND PROTEINS

FILE REFERENCE: 289671359778

CURRENT FILING DATE: 2001-02-26

PRIOR FILING DATE: 2000-05-18

PRIOR PLICATION NUMBER: US 60/185,205

PRIOR PLICATION NUMBER: US 60/185,205

PRIOR FILING DATE: 2000-05-18

SEQ ID NOS: 175

SEQ ID NO 140

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence 143, Sequence 56, Al Sequence 56, Al Sequence 23, Al

Sequence 9, Application US/08807992B

Sequence 9, Application US/08807992B

Patent No. 6022541

GORDERAL INFORMATION:
APPLICANT: Senger, Donald R

APPLICANT: Dvorak, Harold F

TITLE OF INVENTION: Immunological preparation for concurrent

TITLE OF INVENTION: Specific binding to spatially exposed regions of vascular

TITLE OF INVENTION: permeability factor bound in-vivo to a tumor associated bloom

TITLE OF INVENTION: 11

NUMBER OF SEQUENCES:
ADDRESSE: David Prashker, Esq.
STREET: P.O. Box 5387

CITY: Magnolia
STREET: B.O. Box 5387

CITY: Massachusetts
COUNTRY: USA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            CTHER INFORMATION: Description of Artificial Sequence: synthesized CTHER INFORMATION: peptide fragment US-08-742-243-58
                                                                                                                                                                                                                                                                   US-08-742-243-58

Pept. Res. 54:93-99(1999).

-! SUBCELIULAR LOCATION. Secreted.

-! TISSUE SPECIFICITY: Expressed by the venom duct.

-! ALISSUE SPECIFICITY: Expressed by the venom duct.

-! MASS SPECIFICITY: Expressed by the venom duct.

-! MASS SPECIFICITY: BW-888.4; METHOD=LSIMS.

-! SIMILARITY: Belongs to the contryphan family.

TOXID: Hydroxylation; D-amino acid.

C. 1- FUNCTION: Targete vasopressin-oxytocin related receptors.
C. 1- TISSUE SPECIFICITY: Expressed by the venom duct.
C. 1- SINGELLULAR LOCATION: Secreted.
C. 1- SINGELLULAR LY: Belongs to the vasopressin/oxytocin family.

WPI; 2001-442248/47.

Novel monomeric monocyclic peptide, used to interfere with angiogenesis, or lymphangiogenesis, is produced by cyclizing a peptide loop fragment from an exposed loop of a growth factor protein by oxidizing the cysteine residues.

Claim 49; Page 32; 102pp; English.

The sequence represents a monomeric monocyclic peptide of the invention, whose 3-dimensional structure is modelled on the expose loop of human VBGPD (vascular endothelial growth factor). The invention relates to a method of producing a monomeric monocyclic peptide by a measuring betabet acarbon separation distances on opposite antiparallel strands of a

```
peptide loop fragment from an exposed loop of a growth factor protein and cyclising the peptide by oxidising the cysteine residues. The monocyclic peptides, dimeric bicyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptides (comprising 2 linked monocyclic peptides) and a cyclic peptides with at least one amino acid deleted prior to cyclisation are used to interfere with angiogenesis, comprising monocyclic characterised by angiogenesis, neovascularisation or lymphangiogenesis. The condition is diabetic retinopathy, psoriasis, arthropathy, contain, vabstance-induced malignant or benigh tumour, post-recovery cerebrovascular accident, post-angioplasty restenosis, head, heat or cold trauma, substance-induced neovascular sation of the liver, excessive hormone-related angiogenic dysfunction, diabetes induced neovascular sequelae, hypertension induced neovascular sequelae, or chronic liver infection. The peptides are also used to modulate vascular permeability in a mammal (the mammal has a condition characterised by fluid accumulation in peripheral limbs or in lungs, peritoneal cavity, pieura, or brain. The peptides are used to induced by VBGF-C or D and accumulation with an analyse are used to interfere with at least one biological activity induced by VBGF-V VBGF-C or D and are also used in combination with an anti-inflammatory agent, to treat a struction in the peripherally theumatoid arthritis, psoriasis and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ö

```
This invention relates to a novel method for identifying disease targeting peptides. The method comprises exposing a sample from an organ, tissue or cell type of interest, to a phage display library and recovering phage bound to the sample (the phage expresses targeting recovering phage bound to the sample (the phage expresses targeting peptides). The peptides identified by the method of the invention may anti-display to anti-diametric, anti-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Desmosomal cadherin; cell adhesion; CAR sequence; immunosuppressive; cytostatic; antiapoptotic; wound healing; reduce scar tissue; skin graft; organ implant; autoimmune blistering disorder; cancer; apoptosis; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to modulating agents for inhibiting or enhancing desmosomal cadherin mediated cell adhesion, comprising a modulating agent
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       comprising a desmosomal cacherin cell adhesion recognition CAR sequence (ABB45341-ABB47262), a non-peptide mimetic of a desmosomal cacherin CAR sequence, a substance such as an antibody or antigen-binding fragment that specifically binds a desmosomal cacherin CAR sequence and/or a polymucleotide encoching a polypeptide that comprises a desmosomal cacherin CAR sequence or analogue. The modulating agents have
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Modulating agents for inhibiting or enhancing desmosomal cadherin mediated cell adhesion, useful for facilitating wound healing and/or reducing scar tissue, treating cancer and inducing apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;

The invention relates to an isolated peptide of 100 amino acids or less in size useful for targeting delivery to an organ or tissue, particularly to the training a disease, e.g. cancer, arthritis, diabetes, inflammatory disease, atherosclerosis, autoimmune disease, bacterial inflection, viral infection, cardiovascular disease or degenerative disease. The peptide is also useful for inducing apoptosis, particularly to a subject with ischaemia, cancer, arthritis, diabetes, candiovascular disease, inflammation or macular degeneration. Furthermore, the peptide is useful for diagnosing the diseases cited above. Targeting peptides of the invention can also be used to deliver an agent to a foetus, by attaching a peptide to the agent and administering the peptide to a pregnant subject. Sequences ABG60126-ABG60574 represent selective targeting peptides of the invention
                                                                                                                                                                                                                                                                                                                                                                       ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Targeting peptide; cancer; arthritis; diabetes; inflammatory disease; atherosclerosis; autoimmune disease; bacterial infection; apoptosis; viral infection; cardiovascular disease; degenerative disease; inschammation; macular degeneration; antiinflammatory; antidabetic; cardiovascular; immunomodulator; antibacterial; antiviral; cytostatic;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Targeting peptides identified by phage display, useful for targeting delivery to an organ or tissue, particularly for treating a disease, e.g. cancer, inflammatory or autoimmune diseases, infections or cardiovascular
antiapoptotic activity and are used to
                           facilitate wound healing and/or reduce scar tissue, for enhancing adhesion of foreign tissue implants (e.g. skin graft or organ implant), treating an autoimmune blistering disorder and to treat cancer (e.g. carcinoma, leukaemia or melanoma) and induce apoptosis
                                                                                                                                                                                                                                                                                                                                                                       Gaps

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        also be used for targeting delivery to an organ or tissue, such as placental delivery. A receptor that binds to a placenta targeting peptide is used to screen compounds for teratogenic activity. ABR56806 to ABR56927 and ACC79106 to ACC79111 represent sequences used in the exemplification of the present invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention describes a method for treating obesity or a lipodystropathy, which comprises: (a) obtaining a targeting peptide selective for adipose tissue; (b) attaching the peptide to a therapeutic agent to form a complex; (c) administering the complex to a subject; and (d) inducing weight loss in the subject or treating lipodystropathy. The adipose targeting peptides have anorectic and antilipsemic activities, and can be used in peptide and gene therapy. The method is used for treating obesity or a lipodystropathy that is related to infection with human immunodeficiency virus (HIV). The peptides used in the method can
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Treating obesity or a lipodystropathy comprises obtaining a targeting peptide selective for adipose tissue, attaching the peptide to a therapeutic agent to form a complex, and administering the complex to a

Endothelial cell binding peptide SEQ ID NO:21.

(first entry)

18-DEC-2003

ADC44293;

```
The present sequence represents an endothelial cell-binding peptide motif. The peptide may be identified using the method of the invention.

The specification describes a method for generating a peptide having a calected biological activity. The method comprises displaying the selected biological activity. The method comprises displaying the peptide display library. The method comprises displaying the correct of a genetic display package for those containing peptides which have population display packages for those containing peptides which have containing peptides which have a selection of peptides waying effects on cell proliferation.

Conferentiation, death and migration, as well as in the identification of peptides which have anti-proliferative activity with respect to one or corrective peptides (e.g. which are active as anti-fungal or anti-infective peptides (e.g. which are active as anti-fungal or anti-infective peptides (e.g. which are active as anti-fungal or anti-infectival), receptor protein effectors, and ligands for orphan receptors contained the contained may be used to test currently interactions for cell currently and channels interactions for cell
                                                                                                                                                                                          Endothelial cell-binding peptide, Genetic display package; peptide display library; affinity selection, population display package; cell proliferation, cell differentiation, cell dath; cell migration; angiogenic activity; infective peptide; anti-fungal; anti-bacterial;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Generating a peptide with a selected biological activity useful for identifying endothelial inhibitors and peptides with anti-angiogenic activity by combining peptide display libraries in a display and a
                                                                                                                                                      Amino acid sequence of an endothelial cell-binding peptide motif.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Score 26; DB 3; Length 7;

tumour, cytostatic, vasotropic, antipsoriatic, dermatological, cumour, cytostatic, vasotropic, antipsoriatic, dermatological, antidiabetic, antiarthritic, vulnerary, antiulcer, antiantemarcy, antibacterial, and gynaecological activity. The peptide is useful for promoting, reducing the proliferation and/or migration of endothelial cells, by treating the cells with an ECBP agonist, which is preferably the peptide, to promote proliferation and/or migration of the treated cells, and for reducing or promoting angiogenesis, by treating the cells with an ECBP antagonist, which is preferably the peptide of the invention is preferably the peptide of the invention and or applied of the invention and or general section and or more steel to ECBP antagonist. Which is suffered for manufacturing a medicament for promote or reduce angiogenesis at one or more sites in a treated mammal. The medicament is useful for promoting or reducing angiogenesis. ECBP sequences are useful to alter the infectivity spectrum of a viral particle. The present sequence represents an ECBP of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The invention relates to a novel isolated, synthetic or recombinant peptide or polypeptide which includes one or more endothelial cell binding protein (BCBP) sequences. A peptide of the invention has anti-
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Protocadherin cell adhesion recognition cyclic peptide SEQ ID NO:2726.

comprising peptides which comprise a nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating nonclassical cadherin cell adhesion recognition (CAR) sequence. The MAs can be used for modulating conclassical cadherin expressing cells in a mammal, enhancing delivery of a drug through the skin of a mammal, enhancing delivery of a drug to a tumour in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting metastasis of a cancer in a mammal, inhibiting usual palogenesis in a mammal, inhibiting of treating obesity in a mammal, stimulating corresping cells, preventing or treating obesity in a mammal, stimulating blood vessel regression in a mammal, enhancing delivery to the central nervous system, treating a demyelinating neurological disease, increasing vasopermeability in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age cor reducing scar tissue, or enhancing adhesion of foreign tissue in a mammal. They can also be used for treating e.g. psoriasis, arthritis, age creducing can also be used for treating e.g. psoriasis, arthritis, age related macular degeneration, multiple sclerosis and diabetes. The AXX6652 to AAX6652 represent specifically claimed peptides, and have the contract of the contract of the contract of the contraction and diagnosis and in bioreactors. AXX6652 to AAX6652 represent sequences used in
             Modulation, nonclassical cadherin mediated cell adhesion; CAR; inhibition; cadherin extracellular domain; cell adhesion recognition; DB-cadherin; cadherin-5; cadherin-6; cadherin-7; cadherin-12; cadherin-14; cadherin-15; T-cadherin; PB-cadherin; cadherin-16; T-cadherin; pB-cadherin; protocadherin; desmocollin; calcium binding; cancer; tumour; obesity; rheumatoid athhitis; multiple sclerosis; diabetes; metastasis; neurological disease; cyclic.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New cadherin modulating agents, used for modulating nonclassical cadherin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -mediated functions for treating e.g. cancers, obesity, rheumatoid arthritis, multiple sclerosis, diabetes or a neurological disease.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present invention describes cadherin modulating agents (MA)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    the exemplification of the present invention
                                                                                                                                                                                                                                                                           Location/Qualifiers
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Claim 84; Page 201; 252pp; English.

The invention relates to colostrinin peptide fragments which are useful, inter alia, in the treatment of chronic disorders of the immune system colostrinin peptides are used as a medicament in the treatment of neurological disorders e.g., dementia, neurodegenerative disorders e.g., Alzheimer's disease, motor neuron disease e.g., Parkinson's disease, mental disorders e.g., psychosis and neurosis, in acquired immunological deficiencies, chronic bacterial and viral infections and diseases characterised by the presence of beta-awyloid plaques and as a distary supplement for babies, mall children, adults and senile persons, who have been subjected to chemotherapy or have suffered from cachexia or weight loss due to the chronic disease. Colostrinin peptides are also used as food additives and as an auxillary withdrawal treatment for drug addicts, after a period of detoxification and in persons dependent on stimulants. Colostrinin peptides and to treat emotional disturbances, e.g. emotional colostrinin peptides improves the development of immune system in a new benefit equence is modified colostrinin cyclic peptide #10 related to the child and to correct the immunological deficiencies in a child. The present equations are made of the immunological deficiencies in a child. The characteries and the development of immune system in a new construction.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Query Match

The polypeptide sequences represent the 83P5G4-related protein and peptide fragments of the protein. 83P5G4 exhibits prostate specific peptide fragments of the protein. 83P5G4 exhibits prostate specific peptide fragments of the prostate, bladder, kidney, brain, bone, cervix, uterus, ovary, breast, pancreas, stomach, rectum, con and lung. The 83P5G4 polynucleotide, its related protein and peptide fragments and specific PCR primars are therefore useful for diagnosing and treating cancer. A vector comprising a polynucleotide which encodes a single chain monoclonal antibody, that immunospecifically binds to an 83P5G4-related protein, and a ribozyme capable of cleaving a polynucleotide having the 83P5G4 coding sequence, are both useful in the preparation of a composition for treating a patient with a cancer that capresses 83P5G4. The sequences can be used in diagnostic methods to monitor the level of 83P5G4 gene products in serum, blood, urine and to thereby detect the presence of cancerous cells
                                                                                                                                                                        83P5G4-related protein; prostate; testis; tissue; cancer; bladder; liver; tumour; kidney; brain; bone; ovary; breast; pancreas; colon; lung; serum; cytostatic; gene therapy; antibody therapy; ribozyme; blood; cervix; single chain monoclonal antibody; urine; uterus; rectum; stomach; human;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   An isolated 83P5G4-related protein useful as a diagnostic and/or
therapeutic agent in multiple cancers such as prostate, bladder and bone
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                0; Gaps
